Sample code

```
function fileSelect() {
    fetch(remote.value).then(r => r.blob())
    .then(checkFiles) //called with Blob b
}
function checkFiles(b) {
    let a = [...local.files]
    let toplamString = "";
    //Implement this
    let x = remote.value.split("/");
    let uzakdeger = x[x.length-1];
    toplamString+="Remote value : "+uzakdeger+"\n";
    for(let i =0; i<a.length; i++){
        toplamString+=a[i].name+"\n";
    }
    let equal_files = [];
    for(let yerel of a){
        if(yerel.size == b.size && yerel.type == b.type){
            equal_files.push(yerel);
        }
    }
    if(equal_files.length == 0){
        toplamString += "Result: "+a.length+" items checked, all files are different";
        out.innerText = toplamString;
    }
    else{
        for(let i=0; i<equal_files.length; i++){
            toplamString += "Result: "+a.length+" items checked, "+equal_files[i].name+" is the same as "+uzakdeger+" \n";
        }
        out.innerText = toplamString;
    }
}
```
